

05 | MAPPING CONSEQUENCES

TIPS AND INSTRUCTIONS

FUTURES WHEEL

FUTURES WHEEL* is a method to explore direct and indirect impacts and implications of a particular issue or event.

01 Analyze the issue/topic of your concern and highlight the key core element(s) in it. These elements are possible core issues(s).

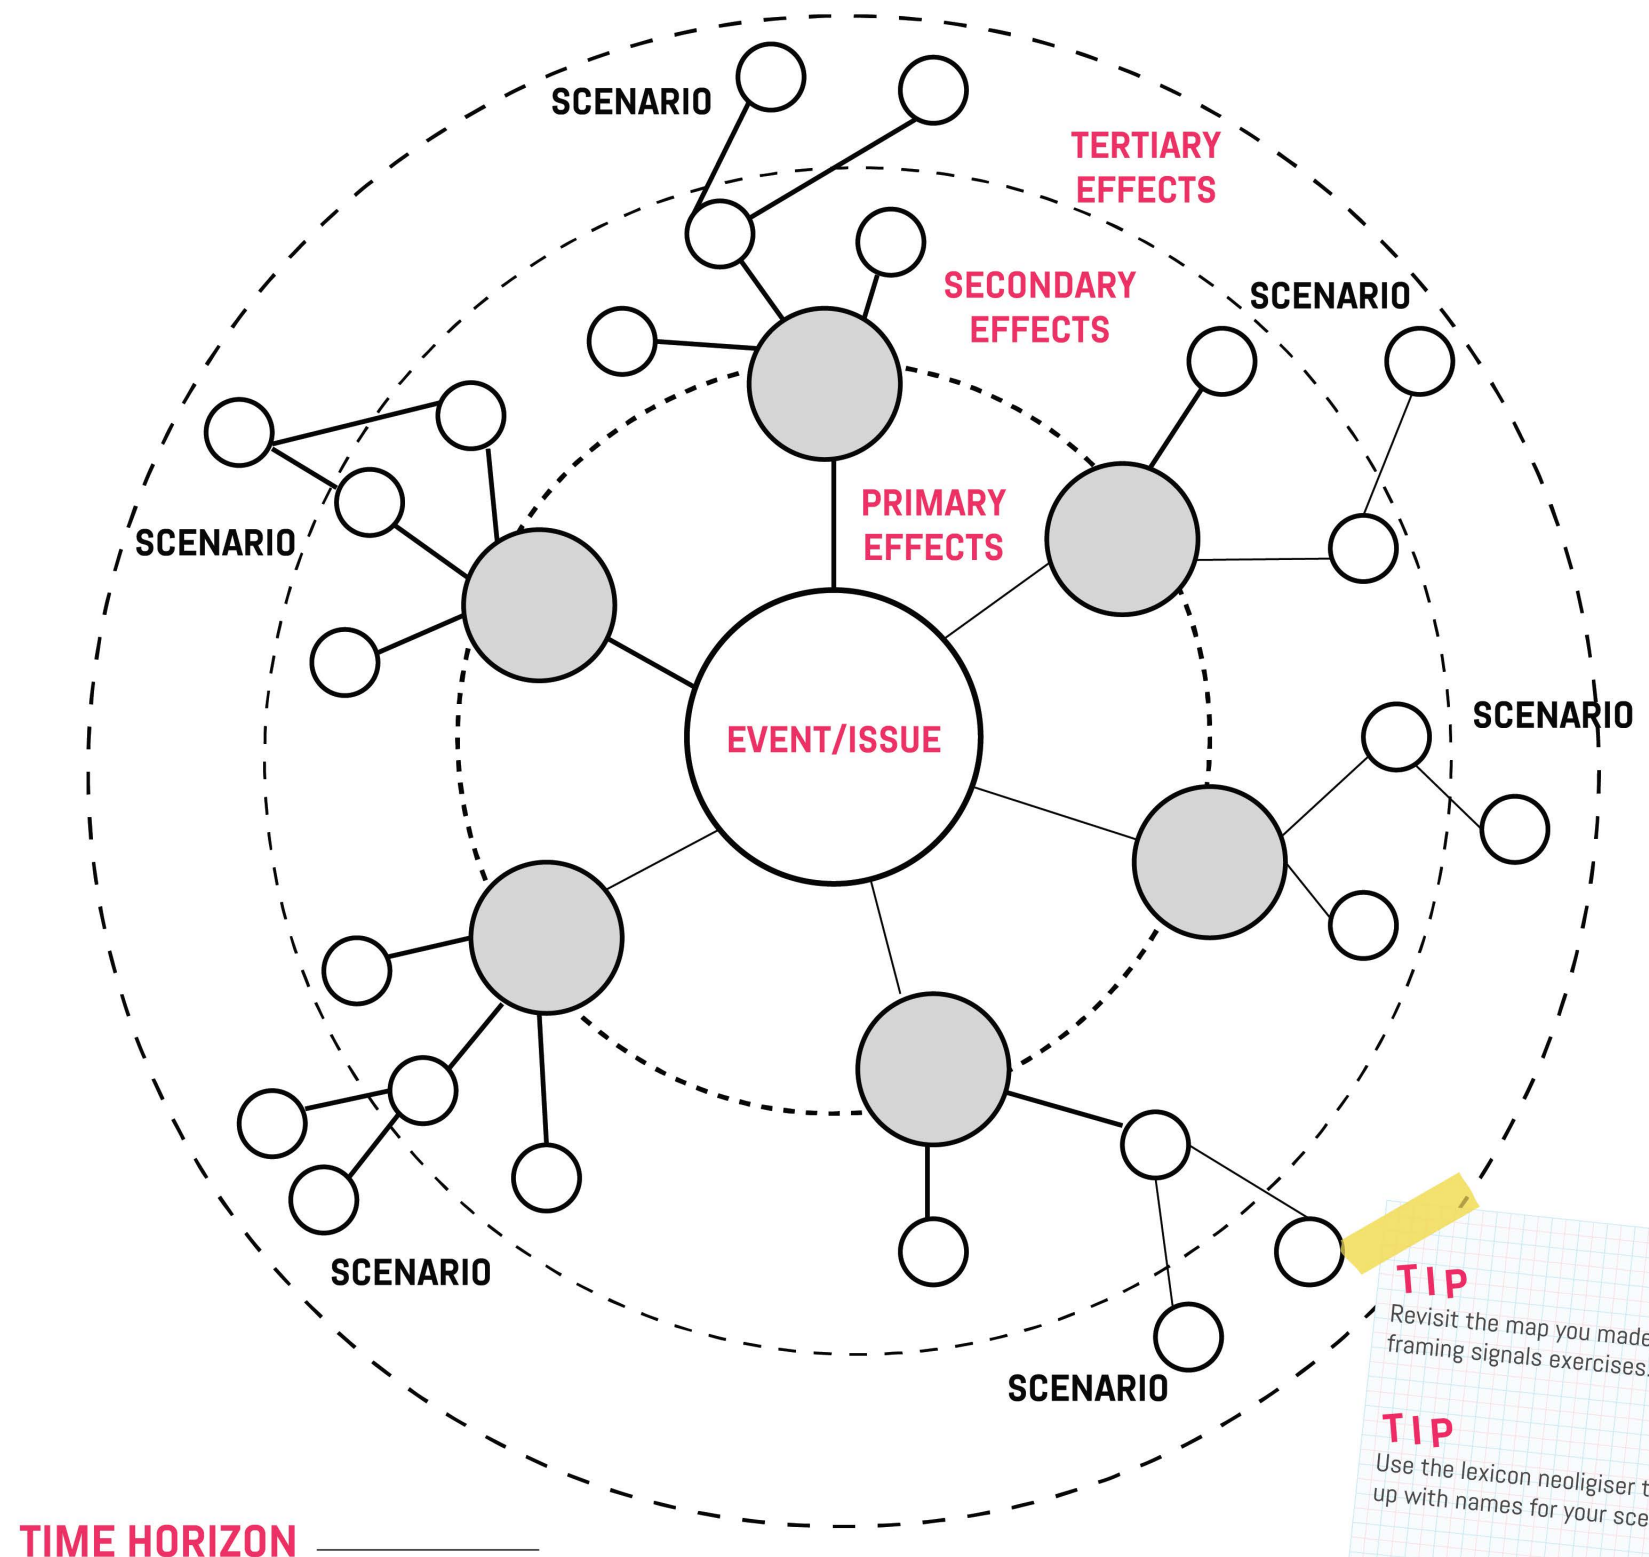

02 Identify the core/focal issue of the project. This should be detailed and defined in order to be able to clearly map possible consequences and scenarios.

03 It's essential in this exercise to identify a timeline for the futures design project. So that you map future events in regard to specific time horizon

04 Firstly, map the primary or direct effects caused by the focal issue. Then, think of what could be the secondary effects which are less direct and finally the tertiary effects which are indirectly affected by the core/focal issue.

05 Identify different possible scenarios based on this mapping.

06 Name the different scenarios.

TIP

Revisit the map you made in the framing signals exercises.

TIP

Use the lexicon neologiser to come up with names for your scenarios
